

## Calculator – 10 points

New features – 5 points

Implement this:

A mockup of a calculator application window. The window has an orange title bar with a small icon on the left and standard window controls (minimize, maximize, close) on the right. The main content area has a light gray background. On the left, there is a white text input field. To its right are two stacked checkboxes: the top one is labeled "Plus" and the bottom one is labeled "Minus". To the right of these checkboxes is another white text input field. Further right is a blue button with a white equals sign (=). To the right of the button is the text "Here is the result!".

When “Plus” check box is selected when the user presses “=” then “Here the result” should be replaced by the sum of the values contained in the 2 input texts.

When “Minus” check box is selected when the user presses “=” then “Here the result” should be replaced by the difference between the values contained in the 2 input texts.
